VANECK VIP EMERGING MARKETS BOND FUND (INITIAL CLASS)

I. SUMMARY INFORMATION

INVESTMENT OBJECTIVE

The VanEck VIP Emerging Markets Bond Fund seeks high total return— income plus capital appreciation— by investing globally, primarily in a variety of debt securities.

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund. The table does not include fees and expenses imposed under your variable annuity contract and/or variable life insurance policy. Because these fees and expenses are not included, the fees and expenses that you will incur will be higher than the fees and expenses set forth in the table.

Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

	Initial Class
Management Fees	1.00%
Other Expenses	0.92%
Total Annual Fund Operating Expenses	1.92%
Fee Waivers and/or Expense Reimbursements ⁽¹⁾	-0.82%
Total Annual Fund Operating Expenses After Fee Waivers and/or Expense Reimbursements	1.10%

⁽¹⁾ Van Eck Associates Corporation (the “Adviser”) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, trading expenses, dividends and interest payments on securities sold short, taxes and extraordinary expenses) from exceeding 1.10% for Initial Class shares of the Fund’s average daily net assets per year until May 1, 2021. During such time, the expense limitation is expected to continue until the Board of Trustees acts to discontinue all or a portion of such expense limitation.

Expense Example

The following example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. The example does not include fees and expenses imposed under your variable annuity contract and/or variable life insurance policy. Because these fees and expenses are not included, the fees and expenses that you will incur will be higher than the fees and expenses set forth in the example.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then either redeem all of your shares at the end of these periods or continue to hold them. The example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same, and applies fee waivers and/or expense reimbursements, if any, for the periods indicated above under “Annual Fund Operating Expenses”. Although your actual expenses may be higher or lower, based on these assumptions, your costs would be:

	Share Status	1 Year	3 Years	5 Years	10 Years
Initial Class	Sold or Held	\$112	\$524	\$961	\$2,177

PORTFOLIO TURNOVER

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate that the Fund pays higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the most recent fiscal year, the Fund’s portfolio turnover rate was 276% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

Under normal conditions, the Fund invests at least 80% of its net assets in emerging market debt securities. An instrument will qualify as an emerging market debt security if it is either (i) issued by an emerging market government, quasi- government or corporate entity (regardless of the currency in which it is denominated) or (ii) denominated in the currency of an emerging market country (regardless of the location of the issuer). The Fund may also invest in non-emerging market debt securities. There is no limit on the amount the Fund may invest in one country or in securities denominated in one currency. The Fund may also invest in debt securities rated below investment grade (“junk bonds”). The Fund is considered to be “non-diversified” which means that it

VANECK VIP EMERGING MARKETS BOND FUND (INITIAL CLASS) (continued)

may invest a larger portion of its assets in a single issuer. The Fund may engage in active and frequent trading of portfolio securities.

The Fund invests in debt issued in emerging market and developed market currencies by governments and government-owned, controlled, or related entities (and their agencies and subdivisions), and by corporations. The Fund may invest in corporate bonds, debentures, notes, commercial paper, time deposits, and certificates of deposit, as well as debt obligations, which may have a call on a common stock or commodity by means of a conversion privilege or attached warrants.

The Fund may also invest in emerging market or developed market currencies. The Fund may use derivative instruments denominated in any currency to enhance return, hedge (or protect) the value of its assets against adverse movements in commodity prices, currency exchange rates, interest rates and movements in the securities markets, manage certain investment risks and/or as a substitute for the purchase or sale of securities, currencies or commodities. The Fund may also use derivative instruments to implement “cross-hedging” strategies, which involve the use of one currency to hedge against the decline in the value of another currency, or to hedge the value of a currency that is embedded in the value of another currency (for example, the value of the Euro that may be embedded in the Polish zloty). The Fund expects to use forward currency contracts; futures on securities, indices, currencies, commodities, swaps and other investments; options; and interest rate swaps, cross-currency swaps, total return swaps and credit default swaps. The Fund may also invest in credit-linked notes. Credit-linked notes are typically issued by a limited purpose trust or other vehicle that, in turn, invests in a derivative or basket of derivatives instruments, such as credit default swaps, interest rate swaps and/or other securities, in order to provide exposure to certain high yield, sovereign debt, emerging markets, or other fixed income markets. The notional value of a cash-settled forward currency contract or other derivative instrument on an emerging market currency (or a currency that is embedded in an emerging market currency) or security (including any security that is a reference security for a credit default swap) will be treated as an emerging market debt security for purposes of complying with the Fund’s policy of investing at least 80% of its net assets in emerging market debt securities.

The Adviser has broad discretion to identify countries that it considers to qualify as emerging markets. The Adviser selects emerging market countries and currencies that the Fund will invest in based on the Adviser’s evaluation of economic fundamentals, legal structure, political developments and other specific factors the Adviser believes to be relevant. The Fund’s investment strategy normalizes countries’ economic fundamentals and compares them to the valuations of the relevant asset prices, particularly the relevant currency’s valuation, the relevant currency’s interest rate, and the relevant hard-currency security’s credit spread. The Fund may invest in instruments whose return is based on the return of an emerging market security such as a derivative instrument, rather than investing directly in emerging market securities.

The Fund’s holdings may include issues denominated in currencies of emerging countries, investment companies (like country funds) that invest in emerging countries, American Depositary Receipts, and similar types of investments, representing emerging market securities. The Fund may purchase securities of any maturity or duration. Duration is a measure of the expected life of a fixed income security that is used to determine the sensitivity of a security’s price to changes in interest rates. The longer a security’s duration, the more sensitive it will be to changes in interest rates. Similarly, a fund with a longer average portfolio duration will be more sensitive to changes in interest rates than a fund with a shorter average portfolio duration. By way of example, the price of a bond fund with an average duration of five years would be expected to fall approximately 5% if interest rates rose by one percentage point.

The Fund may invest up to 20% of its net assets in securities issued by other investment companies (each an “Underlying Fund”), including exchange-traded funds (“ETFs”). The Fund may also invest in money market funds, but these investments are not subject to this limitation. The Fund may invest in ETFs to participate in, or gain exposure to, certain market sectors, or when direct investments in certain countries are not permitted or available. The Fund also may invest in restricted securities, including Rule 144A securities.

PRINCIPAL RISKS

There is no assurance that the Fund will achieve its investment objective. The Fund’s share price and return will fluctuate with changes in the market value of the Fund’s portfolio securities. Accordingly, an investment in the Fund involves the risk of losing money.

Below Investment Grade Securities. Below investment grade securities (sometimes referred to as “junk bonds”) are more speculative than higher-rated securities. These securities have a much greater risk of default and may be more volatile than higher-rated securities of similar maturity. These securities may be less liquid and more difficult to value than higher-rated securities.

Credit. Credit risk is the risk that the issuer or guarantor of a debt security or the counterparty to an over-the-counter contract (including many derivatives) will be unable or unwilling to make timely principal, interest or settlement payments or otherwise honor its obligations. The Fund invests in debt securities that are subject to varying degrees of risk that the issuers of the securities will have their credit ratings downgraded or will default, potentially reducing the value of the securities.

Credit-Linked Notes. As the buyer of a credit-linked note, the Fund assumes the risk of default by the issuer and the underlying reference asset or entity. If the underlying investment defaults, the payments and principal received by the Fund will be reduced or eliminated. Also, in the event the issuer defaults or there is a credit event that relates to the reference asset, the recovery rate generally is less than the Fund's initial investment, and the Fund may lose money.

Currency Management Strategies. Currency management strategies, including the use of forward currency contracts and other derivatives, may substantially change the Fund's exposure to currencies and currency exchange rates and could result in losses to the Fund if currencies do not perform as the Adviser anticipates.

Debt Securities. Debt securities are subject to credit risk and interest rate risk. Credit risk refers to the possibility that the issuer of a debt security will be unable to make interest payments or repay principal when it becomes due. Interest rate risk refers to fluctuations in the value of a debt security resulting from changes in the general level of interest rates. Debt securities with longer durations have higher risk and volatility.

Derivatives. The use of derivatives, such as swap agreements, options, warrants, futures contracts, currency forwards and structured notes, presents risks different from, and possibly greater than, the risks associated with investing directly in traditional securities. The use of derivatives can lead to losses because of adverse movements in the price or value of the underlying currency, security, asset, index or reference rate. Derivative strategies often involve leverage, which may exaggerate a loss, potentially causing the Fund to lose more money than it would have lost had it invested in the underlying security. Also, a liquid secondary market may not always exist for the Fund's derivative positions at times when the Fund might wish to terminate or sell such positions. Over-the-counter instruments may be illiquid, and transactions in derivatives traded in the over-the-counter market are subject to counterparty risk.

Emerging Market Securities. Emerging market securities typically present even greater exposure to the risks described under "Foreign Securities" and may be particularly sensitive to certain economic changes. Emerging market securities are exposed to a number of risks that may make these investments volatile in price or difficult to trade.

Foreign Currency Transactions. An investment transacted in a foreign currency may lose value due to fluctuations in the rate of exchange. These fluctuations can make the return on an investment go up or down, entirely apart from the quality or performance of the investment itself.

Foreign Securities. Foreign investments are subject to greater risks than U.S. domestic investments. These additional risks may include exchange rate fluctuations and exchange controls; less publicly available information; more volatile or less liquid securities markets; and the possibility of arbitrary action by foreign governments, or political, economic or social instability. Foreign companies also may be subject to significantly higher levels of taxation than U.S. companies, including potentially confiscatory levels of taxation, thereby reducing the earnings potential of such foreign companies.

Hedging. Losses or gains generated by a derivative or other instrument or practice used by the Fund for hedging purposes (including for hedging interest rate risk and credit risk) should be substantially offset by gains or losses on the hedged investment. However, the Fund is exposed to the risk that changes in the value of a hedging instrument will not match those of the investment being hedged.

Investments in Other Investment Companies. The Fund's investment in another investment company may subject the Fund indirectly to the underlying risks of the investment company. The Fund also will bear its share of the underlying investment company's fees and expenses, which are in addition to the Fund's own fees and expenses.

Latin American Issuers. Investments in securities of Latin American issuers involve special considerations not typically associated with investments in securities of issuers located in the United States. The economies of certain Latin American countries have, at times, experienced high interest rates, economic volatility, inflation, currency devaluations and high unemployment rates. In addition, commodities (such as oil, gas and minerals) represent a significant percentage of the region's exports and many economies in this region are particularly sensitive to fluctuations in commodity prices. Adverse economic events in one country may have a significant adverse effect on other countries of this region. Most Latin American countries have experienced, at one time or another, severe and persistent levels of inflation, including, in some cases, hyperinflation. This has, in turn, led to high interest rates, extreme measures by governments to keep inflation in check, and a generally debilitating effect on economic growth.

Management. Investment decisions made by the Adviser in seeking to achieve the Fund's investment objective may not produce the returns expected by the Adviser, may cause a decline in the value of the securities held by the Fund and, in turn, cause the Fund's shares to lose value or underperform other funds with similar investment objectives.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions, sudden and unpredictable drops in value, exchange trading suspensions and closures and public health risks. These risks may be magnified if certain social, political, economic and other conditions and events (such as natural disasters, epidemics and pandemics, terrorism, conflicts and social unrest) adversely interrupt the global economy; in these

VANECK VIP EMERGING MARKETS BOND FUND (INITIAL CLASS) (continued)

and other circumstances, such events or developments might affect companies world-wide. An investment in the Fund may lose money.

Non-Diversification. A non-diversified fund's greater investment in a single issuer makes the fund more susceptible to financial, economic or market events impacting such issuer. A decline in the value of or default by a single security in the non-diversified fund's portfolio may have a greater negative effect than a similar decline or default by a single security in a diversified portfolio.

Operational. The Fund is exposed to operational risk arising from a number of factors, including but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or system failures.

Portfolio Turnover. The Fund may engage in active and frequent trading of portfolio securities and thus may experience a high portfolio turnover rate. This may result in significant taxable capital gains as a result of the frequent trading of the Fund's portfolio securities and the Fund will incur transaction costs in connection with buying and selling the securities, which may lower the Fund's return.

Restricted Securities Risk. The Fund may hold securities that are restricted as to resale under the U.S. Federal securities laws, such as securities in certain privately held companies. Such securities may be highly illiquid and their values may experience significant volatility. Restricted securities may be difficult to value.

Sectors. The Fund may be subject to greater risks and market fluctuations than a fund whose portfolio has exposure to a broader range of sectors. The Fund may be susceptible to financial, economic, political or market events, as well as government regulation, impacting the energy and sovereign bond sectors.

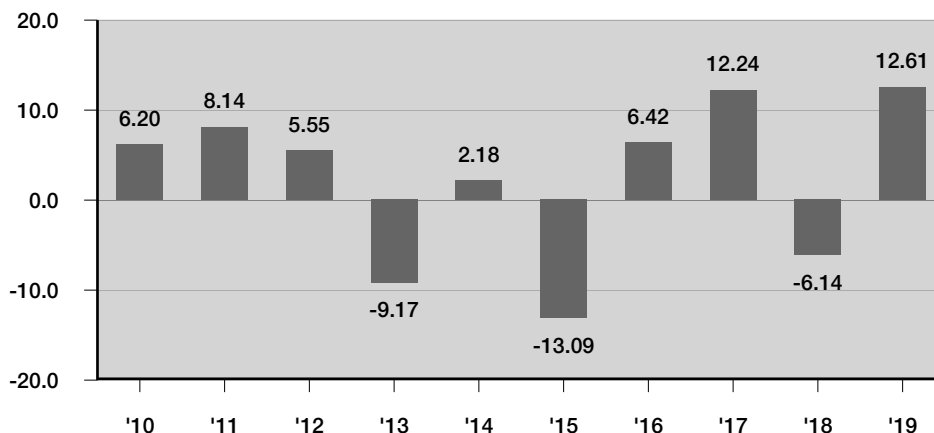

Sovereign Bonds. Investments in sovereign bonds involve special risks not present in corporate bonds. The governmental authority that controls the repayment of the bonds may be unable or unwilling to make interest payments and/or repay the principal on its bonds or to otherwise honor its obligations. If an issuer of sovereign bonds defaults on payments of principal and/or interest, the Fund may have limited recourse against the issuer.

PERFORMANCE

The following chart and table provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual total returns compare with those of a broad measure of market performance and one or more other performance measures. For instance, the 50% J.P. Morgan Emerging Market Bond Index Global Diversified Index/50% J.P. Morgan Government Bond Index-Emerging Markets Global Diversified Index, shown in the table, is a blended, unmanaged index created by the Adviser. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future. Furthermore, the Fund implemented changes to its principal investment strategies on May 1, 2013. If the Fund had invested its assets in accordance with its current principal investment strategies since inception, the performance of the Fund would have been different than that shown below.

Fees and expenses imposed under your variable annuity contract and/or variable life insurance policy are not reflected; if these amounts were reflected, returns would be lower than those shown. Additionally, large purchases and/or redemptions of shares of a class, relative to the amount of assets represented by the class, may cause the annual returns for each class to differ. Updated performance information for the Fund is available on the VanEck website at vaneck.com.

INITIAL CLASS: Annual Total Returns (%) as of 12/31

Best Quarter: +8.36% 3Q '10
 Worst Quarter: -11.12% 2Q '13

PORTFOLIO MANAGEMENT

Investment Adviser. Van Eck Associates Corporation

Portfolio Managers.

Eric Fine has been Portfolio Manager of the Fund since 2012. David Austerweil has been Deputy Portfolio Manager of the Fund since 2014.

PURCHASE AND SALE OF FUND SHARES

The Fund is available for purchase only through variable annuity contracts and variable life insurance policies offered by the separate accounts of participating insurance companies. Shares of the Fund may not be purchased or sold directly by individual owners of variable annuity contracts or variable life insurance policies. If you are a variable annuity contract or variable life insurance policy holder, please refer to the prospectus that describes your annuity contract or life insurance policy for information about minimum investment requirements and how to purchase and redeem shares of the Fund.

TAX INFORMATION

The Fund normally distributes its net investment income and net realized capital gains, if any, to its shareholders, the participating insurance companies investing in the Fund through separate accounts. These distributions may not be taxable to you as a holder of a variable annuity contract or variable life insurance policy; please see "How the Fund is managed—Taxes" and consult the prospectus or other information provided to you by your participating insurance company regarding the federal income taxation of your contract or policy.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase the Fund through a broker-dealer or other financial intermediary (such as an insurance company), the Fund and/or its affiliates may pay intermediaries for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your financial professional to recommend the Fund over another investment. Ask your financial professional or visit your financial intermediary's website for more information.

II. INVESTMENT OBJECTIVE, STRATEGIES, POLICIES, RISKS AND OTHER INFORMATION

This section states the Fund's investment objective and describes certain strategies and policies that the Fund may utilize in pursuit of its investment objective. This section also provides additional information about the principal risks associated with investing in the Fund.

1. INVESTMENT OBJECTIVE

The VanEck VIP Emerging Markets Bond Fund seeks high total return—income plus capital appreciation— by investing globally, primarily in a variety of debt securities.

The Fund's investment objective is fundamental and may only be changed with shareholder approval.

2. ADDITIONAL INFORMATION ABOUT PRINCIPAL INVESTMENT STRATEGIES AND RISKS

Below Investment Grade Securities Risk. Below investment grade securities (sometimes referred to as “junk bonds”) are more speculative than higher-rated securities. These securities have a much greater risk of default (or in the case of bonds currently in default, of not returning principal) and may be more volatile than higher-rated securities of similar maturity. The value of these securities can be affected by overall economic conditions, interest rates, and the creditworthiness of the individual issuers. Additionally, these securities may be less liquid and more difficult to value than higher-rated securities.

Credit Risk. Credit risk is the risk that the issuer or guarantor of a debt security or the counterparty to an over-the-counter contract (including many derivatives) will be unable or unwilling to make timely principal, interest or settlement payments or otherwise honor its obligations. The Fund invests in debt securities that are subject to varying degrees of risk that the issuers of the securities will have their credit ratings downgraded or will default, potentially reducing the value of the securities.

Credit-Linked Notes Risk. As the buyer of a credit-linked note, the Fund assumes the risk of default by the issuer and the underlying reference asset or entity. If the underlying investment defaults, the payments and principal received by the Fund will be reduced or eliminated. Also, in the event the issuer defaults or there is a credit event that relates to the reference asset, the recovery rate generally is less than the Fund's initial investment, and the Fund may lose money.

Currency Management Strategies Risk. The strategy that is generally used in an attempt to reduce the risk and impact of adverse currency movements to protect the value of, or seek to mitigate the currency exposure associated with, an investment (including, for example, mitigating the exposure to the Euro that may be embedded in the Polish zloty).

Currency management strategies, including the use of forward currency contracts and cross-hedging, may substantially change the Fund's exposure to currency exchange rates and could result in losses to the Fund if currencies do not perform as the Adviser expects. In addition, currency management strategies, to the extent that such strategies reduce the Fund's exposure to currency risks, may also reduce the Fund's ability to benefit from favorable changes in currency exchange rates. There is no assurance that the Adviser's use of currency management strategies will benefit the Fund or that they will be, or can be, used at appropriate times. Furthermore, there may not be a perfect correlation between the amount of exposure to a particular currency and the amount of securities in the portfolio denominated in that currency or exposed to that currency. Currency markets are generally less regulated than securities markets. Derivatives transactions, especially forward currency contracts, currency related futures contracts and swap agreements, may involve significant amounts of currency management strategies risk. A fund, like the Fund, that may utilize these types of instruments to a significant extent will be especially subject to currency management strategies risk.

Debt Securities Risk. Debt securities may include bonds and other forms of debentures or obligations. When an issuer sells debt securities, it sells them for a certain price, and for a certain term. Over the term of the security, the issuer promises to pay the buyer a certain rate of interest, then to repay the principal at maturity. Debt securities are also bought and sold in the “secondary market”—that is, they are traded by people other than their original issuers.

Debt securities are subject to credit risk and interest rate risk. Credit risk refers to the possibility that the issuer of a debt security will be unable to make interest payments or repay principal when it becomes due. Various factors could affect the issuer's ability to make timely interest or principal payments, including changes in the issuer's financial condition or in general economic conditions. Interest rate risk refers to fluctuations in the value of a debt security resulting from changes in the general level of interest rates. When the general level of interest rates rise, the value of debt securities will tend to fall, and if interest rates fall, the values of debt securities will tend to rise. Debt securities with longer durations have higher risk and volatility. Changes in government policies, such as raising the federal funds rate and/or further tapering “quantitative easing” measures, may increase interest rates which are currently at or near historic lows. These policy changes, along with changing market conditions, may lead to periods of heightened volatility in the debt securities market, reduced liquidity for certain Fund investments and an increase in Fund redemptions. Interest rate changes and their impact on the Fund and its share price can be sudden and unpredictable. Changes in the value of a debt security usually will not affect the amount of income the Fund receives from it but may affect the value of the Fund's shares.

Certain financial instruments in which the Fund may invest may pay interest based on, or otherwise have payments tied to, the London Inter-bank Offered Rate (“LIBOR”), Euro Interbank Offered Rate and other similar types of reference rates (each, a “Reference Rate”). Due to the uncertainty regarding the future utilization of LIBOR and certain other Reference Rates, and the nature of any replacement rate, the potential effect of a transition away from LIBOR and certain other Reference Rates could, among other negative consequences, adversely impact the pricing, liquidity, value of, return on and trading for a broad array of

INVESTMENT OBJECTIVE, STRATEGIES, POLICIES, RISKS AND OTHER INFORMATION (continued)

financial products, including any Reference Rate-linked securities, loans and derivatives in which the Fund may invest; require extensive negotiations of and/or amendments to agreements and other documentation governing Reference Rate-linked investments products; lead to disputes, litigation or other actions with counterparties or portfolio companies regarding the interpretation and enforceability of “fallback” provisions that provide for an alternative reference rate in the event of Reference Rate unavailability; or cause the Fund to incur additional costs in relation to any of the above factors.

Derivatives Risk. The term “derivatives” covers a broad range of financial instruments, including swap agreements, options, warrants, futures contracts, currency forwards and structured notes, whose values are derived, at least in part, from the value of one or more indicators, such as a security, asset, index or reference rate.

The use of derivatives presents risks different from, and possibly greater than, the risks associated with investing directly in traditional securities. The use of derivatives can lead to losses because of adverse movements in the price or value of the underlying currency, security, asset, index or reference rate, which may be magnified by certain features of the derivatives. Derivative strategies often involve leverage, which may exaggerate a loss, potentially causing the Fund to lose more money than it originally committed to initial margin, and more money than it would have lost had it invested in the underlying security. The values of derivatives may move in unexpected ways, especially in unusual market conditions, and may result in increased volatility, among other consequences. There may be imperfect correlation between changes in the market value of a derivative and the value of its underlying reference asset, or in the case of hedging, in the value of the portfolio investment being hedged, and this may be exaggerated in times of market stress or volatility. Many derivatives require the Fund to post margin or collateral or otherwise maintain liquid assets in a manner that satisfies contractual undertakings and regulatory requirements. In order to satisfy margin or other requirements, the Fund may need to sell securities from its portfolio or exit positions at a time when it may be disadvantageous to do so. All of this could, in turn, affect the Fund's ability to fully execute its investment strategies and/or achieve its investment objective. The use of derivatives may also increase the amount of taxes payable by shareholders, because changes in government regulation of derivatives could affect the character, timing and amount of the Fund's taxable income or gains. Additionally, the Fund's use of derivatives may be limited by the requirements for taxation of the Fund as a regulated investment company. Other risks arise from the Fund's potential inability to terminate or sell derivative positions. A liquid secondary market may not always exist for the Fund's derivative positions at times when the Fund might wish to terminate or sell such positions. Over-the-counter instruments (investments not traded on an exchange) may be illiquid, and transactions in derivatives traded in the over-the-counter market are subject to counterparty risk, which is the risk that the Fund's counterparty in a transaction may be unwilling, or unable, to perform its obligations under the transaction. The use of derivatives also involves the risk of mispricing or improper valuation and that changes in the value of the derivative may not correlate perfectly with the underlying security, asset, index or reference rate. Derivatives may be subject to changing government regulation that could impact the Fund's ability to use certain derivatives and their cost.

In November 2019, the SEC published a proposed rulemaking related to the use of derivatives and certain other transactions by registered investment companies that would, if adopted, for the most part rescind the guidance of the SEC and its staff regarding asset segregation and cover transactions. Instead of complying with current guidance, the fund would need to trade derivatives and other transactions that create future payment or delivery obligations (except reverse repurchase agreements and similar financing transactions) subject to a value-at-risk (“VaR”) leverage limit, certain other derivatives risk management program and testing requirements and requirements related to board reporting. These new requirements would apply unless the fund is qualified as a “limited derivatives user,” as defined in the SEC's proposal. The fund trading reverse repurchase agreements or similar financing transactions would need to aggregate the amount of indebtedness associated with the reverse repurchase agreements or similar financing transactions with the aggregate amount of any other senior securities representing indebtedness when calculating the fund's asset coverage ratio. Reverse repurchase agreements or similar financing transactions would not be included in the calculation of whether the fund is a limited derivatives user, but for the fund subject to the VaR testing, reverse repurchase agreements and similar financing transactions would be included for purposes of such testing. Any new requirements, if adopted, may increase the cost of the fund's investments and cost of doing business, which could adversely affect investors.

Leverage Risk. To the extent that the Fund borrows money or utilizes certain derivatives, it may be leveraged. Leveraging generally exaggerates the effect on NAV of any increase or decrease in the market value of the Fund's portfolio securities. To manage the risk associated with leveraging, the Fund may segregate liquid assets, or otherwise “cover” its derivatives position in a manner consistent with the 1940 Act and the rules and SEC interpretations thereunder. The Fund may modify its asset segregation policies at any time to comply with any changes in the SEC's positions regarding asset segregation.

Emerging Market Securities Risk. Securities (i) issued by an emerging market government, quasi-government or corporate entity (regardless of the currency in which it is denominated) or (ii) denominated in the currency of an emerging market country (regardless of the location of the issuer).

Emerging market securities typically present even greater exposure to the risks described under “Foreign Securities Risk” and may be particularly sensitive to certain economic changes. Emerging market securities are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the U.S. These restrictions and/or controls may at times limit or prevent foreign investment in

securities of issuers located or operating in emerging market countries. Market risks may include economies that concentrate in only a few industries, securities issued that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information. These factors, among others, make investing in issuers located or operating in emerging market countries significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's shares.

Foreign Currency Risk. Investments in global markets or securities that are denominated in foreign currencies give rise to foreign currency exposure. The U.S. dollar value of these investments will vary depending on changes in exchange rates and the performance of the underlying assets.

The Fund's shares are priced (purchased and redeemed) in U.S. dollars and the distributions paid by the Fund are paid in U.S. dollars. However, a substantial portion of the Fund's assets may be denominated in foreign (non-U.S.) currencies and income received by the Fund from many of its investments may be paid in foreign currencies. Foreign currencies may decline in value relative to the U.S. dollar and adversely affect the value of the Fund's investments in foreign currencies, securities denominated in foreign currencies, derivatives that provide exposure to foreign currencies, and the Fund's income available for distribution. The value of foreign currencies, securities denominated in foreign currencies or derivatives that provide exposure to foreign currencies may be adversely affected by currency exchange rates, currency exchange control regulations, foreign withholding taxes, restrictions or prohibitions on the repatriation of foreign currencies, changes in supply and demand in the currency exchange markets, actual or perceived changes in interest rates, intervention (or the failure to intervene) by U.S. or foreign governments, central banks, or supranational agencies such as the International Monetary Fund, and currency controls or other political and economic developments in the U.S. or abroad. The local emerging market currencies in which the Fund may be invested from time to time may experience substantially greater volatility against the U.S. dollar than the major convertible currencies of developed countries.

The Adviser, may, but is not required to, attempt to mitigate (or "hedge") the risks associated with currency exposure or fluctuations by entering into forward, futures, options, swap or other contracts to purchase or sell the currency of denomination of any investment held by the Fund or which poses a risk to the Fund and any other currencies held by the Fund. Such contracts may not be available on favorable terms or in all of the currencies in which the Fund may invest from time to time.

In the case of hedging positions, currency risk includes the risk that the currency to which the Fund has obtained exposure declines in value relative to the foreign currency being hedged. In such event, the Fund may realize a loss on the hedging instrument at the same time the Fund is realizing a loss on the currency being hedged. There is no assurance that any such hedging strategies will be available or will be used by the Fund or, if used, that they will be successful.

The Fund may use derivatives to acquire positions in currencies whose value the Adviser expects to correlate with the value of currencies the Fund owns, currencies the Adviser wants the Fund to own, or currencies the Fund is exposed to indirectly or directly through its investments. If the exchange rates of the currencies involved do not move as expected, the Fund could lose money on its holdings of a particular currency and also lose money on the derivative. The Fund may also take overweighted or underweighted currency positions and/or alter the currency exposure of the securities in which it has invested. As a result, its currency exposure may differ (in some cases significantly) from the currency exposure of its security investments.

Foreign Securities Risk. Securities issued by a foreign government, quasi-government or corporate entity, traded in foreign currencies or issued by companies with most of their business interests in foreign countries.

Foreign investments are subject to greater risks than U.S. domestic investments. These additional risks may include exchange rate fluctuations and exchange controls; less publicly available information; more volatile or less liquid securities markets; and the possibility of arbitrary action by foreign governments, including the takeover of property without adequate compensation or imposition of prohibitive taxation, or political, economic or social instability. The Fund invests in securities of issuers located in countries whose economies are heavily dependent upon trading with key partners. Any reduction in this trading may have an adverse impact on the Fund's investments. Foreign companies also may be subject to significantly higher levels of taxation than U.S. companies, including potentially confiscatory levels of taxation, thereby reducing the earnings potential of such foreign companies. Foreign companies may become subject to sanctions imposed by the United States, another country or an international organization, which could result in the immediate freeze of the foreign companies' assets or securities. The imposition of such sanctions could impair the market value of the securities of such foreign companies and limit the Fund's ability to buy, sell, receive or deliver the securities. The Fund may invest indirectly in foreign securities through depositary receipts, such as American Depositary Receipts (ADRs), which involve risks similar to those associated with direct investments in such securities.

Hedging Risk. Hedging is a strategy in which a derivative or other instrument or practice is used to offset the risks associated with other Fund holdings or the risk associated with the Fund temporarily not being fully invested because of significant cash inflows.

Losses generated by a derivative or other instrument or practice used by the Fund for hedging purposes (including for hedging interest rate risk and credit risk) should be substantially offset by gains on the hedged investment. However, although hedging can reduce or eliminate losses, it can also reduce or eliminate gains. In addition, the Fund is exposed to the risk that changes in the value of a hedging instrument will not match those of the investment being hedged. The Adviser may not be able to predict

INVESTMENT OBJECTIVE, STRATEGIES, POLICIES, RISKS AND OTHER INFORMATION (continued)

correctly the direction of securities prices, interest rates and other economic factors, which could cause the Fund's hedges to lose value. There can be no assurance that the Fund's hedging transactions will be effective.

Risks of Investing in Other Investment Companies. The Fund may invest up to 20% of its net assets in securities issued by other investment companies (excluding money market funds), including open end and closed end funds and ETFs, subject to the limitations under the Investment Company Act of 1940, as amended (the "1940 Act"). The Fund's investments in money market funds are not subject to this limitation.

The Fund's investment in another investment company may subject the Fund indirectly to the underlying risks of the investment company. The Fund also will bear its share of the underlying investment company's fees and expenses, which are in addition to the Fund's own fees and expenses. Shares of closed-end funds and ETFs may trade at prices that reflect a premium above or a discount below the investment company's net asset value, which may be substantial in the case of closed-end funds. If investment company securities are purchased at a premium to net asset value, the premium may not exist when those securities are sold and the Fund could incur a loss.

Risks of Investing in Latin American Issuers. As of December 31, 2019, the Fund invested a significant portion of its assets in securities of Latin American issuers. Investments in securities of Latin American issuers involve special considerations not typically associated with investments in securities of issuers located in the United States. The economies of certain Latin American countries have, at times, experienced high interest rates, economic volatility, inflation, currency devaluations and high unemployment rates. In addition, commodities (such as oil, gas and minerals) represent a significant percentage of the region's exports and many economies in this region are particularly sensitive to fluctuations in commodity prices. Adverse economic events in one country may have a significant adverse effect on other countries of this region. Most Latin American countries have experienced, at one time or another, severe and persistent levels of inflation, including, in some cases, hyperinflation. This has, in turn, led to high interest rates, extreme measures by governments to keep inflation in check, and a generally debilitating effect on economic growth. Although inflation in many Latin American countries has lessened, there is no guarantee it will remain at lower levels. The political history of certain Latin American countries has been characterized by political uncertainty, intervention by the military in civilian and economic spheres, and political corruption. Such events could reverse favorable trends toward market and economic reform, privatization, and removal of trade barriers, and could result in significant disruption in securities markets in the region. The economies of Latin American countries are generally considered emerging markets and can be significantly affected by currency devaluations. Certain Latin American countries may also have managed currencies which are maintained at artificial levels relative to the U.S. dollar rather than at levels determined by the market. This type of system can lead to sudden and large adjustments in the currency which, in turn, can have a disruptive and negative effect on foreign investors. Certain Latin American countries also restrict the free conversion of their currency into foreign currencies, including the U.S. dollar. There is no significant foreign exchange market for many Latin American currencies and it would, as a result, be difficult for the Fund to engage in foreign currency transactions designed to protect the value of the Fund's interests in securities denominated in such currencies. Finally, a number of Latin American countries are among the largest debtors of developing countries. There have been moratoria on, and a rescheduling of, repayment with respect to these debts. Such events can restrict the flexibility of these debtor nations in the international markets and result in the imposition of onerous conditions on their economies.

Management Risk. Investment decisions made by the Adviser in seeking to achieve the Fund's investment objective may not produce the returns expected by the Adviser, may cause a decline in the value of the securities held by the Fund and, in turn, cause the Fund's shares to lose value or underperform other funds with similar investment objectives.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions, sudden and unpredictable drops in value, exchange trading suspensions and closures and public health risks. These risks may be magnified if certain social, political, economic and other conditions and events (such as natural disasters, epidemics and pandemics, terrorism, conflicts and social unrest) adversely interrupt the global economy; in these and other circumstances, such events or developments might affect companies world-wide. Overall securities values could decline generally or could underperform other investments. An investment in the Fund may lose money.

Non-Diversification Risk. A non-diversified fund may invest a larger portion of its assets in a single issuer than a "diversified" fund. A "diversified" fund is required by the 1940 Act, generally, with respect to the value of 75% of its total assets, to invest not more than 5% of such assets in the securities of a single issuer, and not to hold more than 10% of the outstanding voting securities of a single issuer.

A non-diversified fund's greater investment in a single issuer makes the fund more susceptible to financial, economic or market events impacting such issuer. A decline in the value of or default by a single security in the non-diversified fund's portfolio may have a greater negative effect than a similar decline or default by a single security in a diversified portfolio.

Operational Risk. An investment in the Fund involves "operational risk"—the risk arising from the Fund's operations. The Fund is exposed to operational risk arising from a number of factors, including but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or system failures.

Portfolio Turnover Risk. The Fund may engage in active and frequent trading of portfolio securities and thus may experience a high portfolio turnover rate. A high portfolio turnover rate may result in significant taxable capital gains as a result of the frequent trading of the Fund's portfolio securities and the Fund will incur transaction costs in connection with buying and selling the securities, which may lower the Fund's return.

Restricted Securities Risk. Regulation S and Rule 144A securities are restricted securities. Restricted securities are securities that are not registered under the Securities Act. They may be less liquid and more difficult to value than other investments because such securities may not be readily marketable. The Fund may not be able to sell a restricted security promptly or at a reasonable time or price. Although there may be a substantial institutional market for these securities, it is not possible to predict exactly how the market for such securities will develop or whether it will continue to exist. A restricted security that was liquid at the time of purchase may subsequently become illiquid and its value may decline as a result. Restricted securities that are deemed illiquid will count towards the Fund's limitation on illiquid securities. In addition, transaction costs may be higher for restricted securities than for more liquid securities. The Fund may have to bear the expense of registering restricted securities for resale and the risk of substantial delays in effecting the registration.

Sovereign Bonds Risk. As of December 31, 2019, the Fund invested a significant portion of its assets in bonds issued by governmental authorities. Investments in sovereign bonds involve special risks not present in corporate bonds. The governmental authority that controls the repayment of the bonds may be unable or unwilling to make interest payments and/or repay the principal on its bonds or to otherwise honor its obligations. If an issuer of sovereign bonds defaults on payments of principal and/or interest, the Fund may have limited recourse against the issuer. During periods of economic uncertainty, the market prices of sovereign bonds, and the Fund's net asset value, may be more volatile than prices of corporate bonds, which may result in losses. In the past, certain governments of emerging market countries have declared themselves unable to meet their financial obligations on a timely basis, which has resulted in losses for holders of sovereign bonds.

3. ADDITIONAL INVESTMENT STRATEGIES

ADDITIONAL REGULATORY CONSIDERATIONS

With respect to the Fund, the Adviser has claimed an exclusion from the definition of a "commodity pool operator" ("CPO") under the Commodity Exchange Act of 1936 ("CEA") and the rules of the U.S. Commodity Futures Trading Commission ("CFTC") and, therefore, is not subject to CFTC registration or regulation as a CPO. In addition, with respect to the Fund, the Adviser is relying upon a related exclusion from the definition of a "commodity trading advisor" ("CTA") under the CEA and the rules of the CFTC. The terms of the CPO exclusion require the Fund, among other things, to adhere to certain limits on its investments in "commodity interests." Commodity interests include commodity futures, commodity options and swaps, which in turn include non-deliverable currency forward contracts. Because the Adviser and the Fund intend to comply with the terms of the CPO exclusion, the Fund may, in the future, need to adjust its investment strategies, consistent with its investment objective to limit its investments in these types of instruments. The Fund is not intended as a vehicle for trading in the commodity futures, commodity options or swaps markets. The CFTC has neither reviewed nor approved the Adviser's reliance on these exclusions, or the Fund, its investment strategies or this prospectus.

INVESTING DEFENSIVELY

The Fund may take temporary defensive positions that are inconsistent with the Fund's principal investment strategies in anticipation of or in an attempt to respond to adverse market, economic, political or other conditions. The Fund may not achieve its investment objective while it is investing defensively.

SECURITIES LENDING

The Fund may lend its securities as permitted under the 1940 Act, including by participating in securities lending programs managed by broker-dealers or other institutions. Securities lending allows the Fund to retain ownership of the securities loaned and, at the same time, earn additional income. The borrowings must be collateralized in full with cash, U.S. government securities or high quality letters of credit.

The Fund could experience delays and costs in recovering the securities loaned or in gaining access to the securities lending collateral. If the Fund is not able to recover the securities loaned, the Fund may sell the collateral and purchase a replacement investment in the market. The value of the collateral could decrease below the value of the replacement investment by the time the replacement investment is purchased. Cash received as collateral and which is invested is subject to market appreciation and depreciation.

INVESTING IN CHINESE BONDS

The Fund may invest in Renminbi ("RMB")-denominated bonds issued in the People's Republic of China ("PRC") by Chinese credit, government and quasi-governmental issuers ("RMB Bonds"). RMB Bonds are available on the China interbank bond market ("CIBM") to eligible foreign investors through the CIBM Direct Access Program and through the "Mutual Bond Market Access between Mainland China and Hong Kong" ("Bond Connect") program. The Fund's investments in bonds through either program will be subject to a number of additional risks and restrictions that may affect the Fund's investments and returns.

The Bond Connect program and the CIBM Direct Access Program are relatively new. Laws, rules, regulations, policies, notices, circulars or guidelines relating to the programs as published or applied by the relevant authorities of the PRC are untested and are

INVESTMENT OBJECTIVE, STRATEGIES, POLICIES, RISKS AND OTHER INFORMATION (continued)

subject to change from time to time. There can be no assurance that the Bond Connect program and/or the CIBM Direct Access Program will not be restricted, suspended or abolished.

Under the prevailing PRC regulations, eligible foreign investors who wish to participate in the Bond Connect program may do so through an offshore custody agent, registration agent or other third parties (as the case may be), who would be responsible for making the relevant filings and account opening with the relevant authorities. The Fund is therefore subject to the risk of default or errors on the part of such agents.

Under the prevailing PRC regulations, eligible foreign institutional investors who wish to invest directly in CIBM through the CIBM Direct Access Program may do so through an onshore settlement agent, who would be responsible for making the relevant filings and account opening with the relevant authorities. The Fund is therefore subject to the risk of default or errors on the part of such agent.

Trading through the Bond Connect program is performed through newly developed trading platforms and operational systems. There is no assurance that such systems will function properly (in particular, under extreme market conditions) or will continue to be adapted to changes and developments in the market. In addition, where the Fund invests in the CIBM through the Bond Connect program, it may be subject to risks of delays inherent in the order placing and/or settlement.

Investing in RMB Bonds involves additional risks, including, but not limited to, the fact that the economy of China differs, often unfavorably, from the U.S. economy, as it relates to, among other things, currency revaluation, structure, general development, government involvement, wealth distribution, rate of inflation, growth rate, allocation of resources and capital reinvestment.

The RMB is currently not a freely convertible currency. The Chinese government places strict regulation on the RMB and sets the value of the RMB to levels dependent on the value of the U.S. dollar. The Chinese government's imposition of restrictions on the repatriation of RMB out of mainland China may limit the depth of the offshore RMB market and reduce the liquidity of the Fund's investments.

4. OTHER INFORMATION AND POLICIES

BENEFICIARIES OF CONTRACTUAL ARRANGEMENTS

VanEck VIP Trust (the "Trust") enters into contractual arrangements with various parties, including, among others, the Fund's investment adviser, administrator and distributor, who provide services to the Fund. Shareholders of the Fund are not parties to, or intended (or "third-party") beneficiaries of, any of those contractual arrangements, and those contractual arrangements are not intended to create in any individual shareholder or group of shareholders any right to enforce such contractual arrangements against the service providers or to seek any remedy under such contractual arrangements against the service providers, either directly or on behalf of the Trust.

This prospectus provides information concerning the Trust and the Fund that you should consider in determining whether to purchase shares of the Fund. None of this prospectus, the Statement of Additional Information ("SAI") or any document filed as an exhibit to the Trust's registration statement, is intended to, nor does it, give rise to an agreement or contract between the Trust or the Fund and any investor, or give rise to any contract or other rights in any individual shareholder, group of shareholders or other person other than any rights conferred explicitly by federal or state securities laws that may not be waived.

CHANGING THE FUND'S 80% POLICY

The Fund's policy of investing "at least 80% of its net assets" (which includes net assets plus any borrowings for investment purposes) may be changed by the Board of Trustees (the "Board") without a shareholder vote, as long as shareholders are given 60 days' notice of the change.

CYBER SECURITY

The Fund and its service providers are susceptible to cyber security risks that include, among other things, theft, unauthorized monitoring, release, misuse, loss, destruction or corruption of confidential and highly restricted data; denial of service attacks; unauthorized access to relevant systems; compromises to networks or devices that the Fund and its service providers use to service the Fund's operations; and operational disruption or failures in the physical infrastructure or operating systems that support the Fund and its service providers. Cyber attacks against or security breakdowns of the Fund or its service providers may adversely impact the Fund and its shareholders, potentially resulting in, among other things, financial losses; the inability of Fund shareholders to transact business and the Fund to process transactions; the inability to calculate the Fund's net asset value; violations of applicable privacy and other laws; regulatory fines, penalties, reputational damage, reimbursement or other compensation costs; and/or additional compliance costs. The Fund may incur additional costs for cyber security risk management and remediation purposes. In addition, cyber security risks may also impact issuers of securities in which the Fund invests, which may cause the Fund's investments in such issuers to lose value. There can be no assurance that the Fund or its service providers will not suffer losses relating to cyber attacks or other information security breaches in the future.

PORTFOLIO HOLDINGS INFORMATION

Generally, it is the Fund's and Adviser's policy that no current or potential investor, including any Fund shareholder, shall be provided information about the Fund's portfolio on a preferential basis in advance of the provision of that information to other

investors. A complete description of the Fund's policies and procedures with respect to the disclosure of the Fund's portfolio securities is available in the Fund's SAI.

Portfolio holdings information for the Fund is available to all investors on the VanEck website at vaneck.com. Information regarding the Fund's top holdings and country and sector weightings, updated as of each month-end, is also located on this website. Generally, this information is posted to the website within 10 business days of the end of the applicable month. This information generally remains available on the website until new information is posted. The Fund reserves the right to exclude any portion of these portfolio holdings from publication when deemed in the best interest of the Fund, and to discontinue the posting of portfolio holdings information at any time, without prior notice.

PORTFOLIO INVESTMENTS

The percentage limitations relating to the composition of the Fund's portfolio apply at the time the Fund acquires an investment. A subsequent increase or decrease in percentage resulting from a change in the value of portfolio securities or the total or net assets of the Fund will not be considered a violation of the restriction.

III. HOW THE FUND IS MANAGED

1. MANAGEMENT OF THE FUND

INVESTMENT ADVISER

Van Eck Associates Corporation (the “Adviser”), 666 Third Avenue, New York, NY 10017, is the Adviser to the Fund. The Adviser has been an investment adviser since 1955 and also acts as adviser or sub-adviser to other mutual funds, exchange-traded funds, other pooled investment vehicles and separate accounts.

Jan F. van Eck and members of his family own 100% of the voting stock of the Adviser. As of December 31, 2019, the Adviser’s assets under management were approximately \$54.7 billion.

THE ADVISER, THE FUND, AND INSURANCE COMPANY SEPARATE ACCOUNTS

The Fund sells shares to various insurance company variable annuity and variable life insurance separate accounts as a funding vehicle for those accounts. The Fund does not foresee any disadvantages to shareholders from offering the Fund to various insurance companies. However, the Board will monitor any potential conflicts of interest. If conflicts arise, the Board may require an insurance company to withdraw its investments in one Fund, and place them in another. This might force the Fund to sell securities at a disadvantageous price. The Board may refuse to sell shares of the Fund to any separate account. It may also suspend or terminate the offering of shares of the Fund if required to do so by law or regulatory authority, or if such an action is in the best interests of Fund shareholders. The Adviser and its affiliates act as investment manager of several hedge funds and other investment companies and/or accounts (the “Other Clients”), which trade in the same securities as the Fund. These Other Clients may have investment objectives and/or investment strategies similar to or completely opposite of those of the Fund. From time to time such Other Clients may enter contemporaneous trades with those of the Fund, which implement strategies that are similar to or directly opposite those of the Fund. The Adviser will maintain procedures reasonably designed to ensure that the Fund is not unduly disadvantaged by such trades, yet still permit the Other Clients to pursue their own investment objectives and strategies.

FEES PAID TO THE ADVISER

The Fund pays the Adviser a monthly fee at the annual rate of 1.00% of the first \$500 million of the Fund’s average daily net assets, 0.90% on the next \$250 million of the Fund’s average daily net assets and 0.70% of the Fund’s average daily net assets in excess of \$750 million. This includes the fee paid to the Adviser for accounting and administrative services. The Adviser has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, trading expenses, dividends and interest payments on securities sold short, taxes and extraordinary expenses) from exceeding 1.10% for Initial Class shares of the Fund’s average daily net assets per year until May 1, 2021. During such time, the expense limitation is expected to continue until the Board acts to discontinue all or a portion of such expense limitation.

For the Fund’s most recent fiscal year, the advisory fee paid to the Adviser was as follows:

VanEck VIP Trust	As a % of average daily net assets
VanEck VIP Emerging Markets Bond Fund	1.00%

A discussion regarding the basis for the Board’s approval of the investment advisory agreement of the Fund is available in the Fund’s semi-annual report to shareholders for the period ended June 30, 2019.

PORTFOLIO MANAGERS

VANECK VIP EMERGING MARKETS BOND FUND

Eric Fine, Portfolio Manager of the Fund, is primarily responsible for the day-to-day portfolio management of the Fund.

Eric Fine. Mr. Fine is Portfolio Manager of the Fund. He has been with the Adviser since 2009. Prior to joining the Adviser, Mr. Fine conducted business in emerging markets for over 20 years, including 14 years at Morgan Stanley where he ran the Global Emerging Markets Research Group and founded and managed the Emerging Markets Proprietary Trading Group. Mr. Fine also started and led Morgan Stanley’s Europe/Middle East/Africa Strategy and Economics Research Group and helped start the firm’s emerging markets business in London.

David Austerweil. Mr. Austerweil is Deputy Portfolio Manager of the Fund. He has been with the Adviser since 2012 and has over 10 years’ experience in the financial markets. Prior to joining the Adviser, Mr. Austerweil served as vice president at ING Financial Services working on the emerging market credit trading and structuring desk.

The SAI provides additional information about the above Portfolio Managers, their compensation, other accounts they manage, and their securities ownership in the Fund.

THE TRUST

For more information on the Trust, the Trustees and the Officers of the Trust, see “General Information,” “Description of the Trust” and “Trustees and Officers” in the SAI.

THE DISTRIBUTOR

Van Eck Securities Corporation, 666 Third Avenue, New York, NY 10017 (the “Distributor”), a wholly owned subsidiary of the Adviser, has entered into a Distribution Agreement with the Trust for distributing shares of the Fund.

The Distributor generally sells and markets shares of the Fund through intermediaries, including insurance companies or their affiliates. The intermediaries may be compensated by the Fund for providing various services.

In addition, the Distributor or the Adviser may pay certain intermediaries, out of its own resources and not as an expense of the Fund, additional cash or non-cash compensation as an incentive to intermediaries to promote and sell shares of the Fund and other mutual funds distributed by the Distributor. These payments are commonly known as “revenue sharing”. The benefits that the Distributor or the Adviser may receive when each of them makes these payments include, among other things, placing the Fund on the intermediary’s sales system and/or preferred or recommended fund list, offering the Fund through the intermediary’s advisory or other specialized programs, and/or access (in some cases on a preferential basis over other competitors) to individual members of the intermediary’s sales force. Such payments may also be used to compensate intermediaries for a variety of administrative and shareholders services relating to investments by their customers in the Fund.

The fees paid by the Distributor or the Adviser to intermediaries may be calculated based on the gross sales price of shares sold by an intermediary, the net asset value of shares held by the customers of the intermediary, or otherwise. These fees may, but are not normally expected to, exceed in the aggregate 0.50% of the average net assets of the Fund attributable to a particular intermediary on an annual basis.

The Distributor or the Adviser may also provide intermediaries with additional cash and non-cash compensation, which may include financial assistance to intermediaries in connection with conferences, sales or training programs for their employees, seminars for the public and advertising campaigns, technical and systems support, attendance at sales meetings and reimbursement of ticket charges. In some instances, these incentives may be made available only to intermediaries whose representatives have sold or may sell a significant number of shares.

Intermediaries may receive different payments, based on a number of factors including, but not limited to, reputation in the industry, sales and asset retention rates, target markets, and customer relationships and quality of service. No one factor is determinative of the type or amount of additional compensation to be provided. Financial intermediaries that sell Fund’s shares may also act as a broker or dealer in connection with execution of transactions for the Fund’s portfolio. The Fund and the Adviser have adopted procedures to ensure that the sales of the Fund’s shares by an intermediary will not affect the selection of brokers for execution of portfolio transactions.

Not all intermediaries are paid the same to sell mutual funds. Differences in compensation to intermediaries may create a financial interest for an intermediary to sell shares of a particular mutual fund, or the mutual funds of a particular family of mutual funds. Before purchasing shares of the Fund, you should ask your intermediary or its representative about the compensation in connection with the purchase of such shares, including any revenue sharing payments it receives from the Distributor.

HOW THE FUND IS MANAGED (continued)

2. TAXES

The Fund intends to qualify as a “regulated investment company” under the Internal Revenue Code of 1986, as amended (the “Code”). As such, the Fund generally will not be subject to federal income tax to the extent that it distributes its net income and net capital gains. However, the applicable tax rules for qualification as a regulated investment company are extremely complex and it is possible the Fund might not so qualify. To the extent the Fund does not so qualify, it will be subject to tax at the applicable corporate income tax rate for the taxable year in question. Additionally, even if the Fund qualifies as a regulated investment company, it may be subject to corporate tax on certain income.

The Code requires funds used by insurance company variable annuity and life insurance contracts to comply with special diversification requirements for such contracts to qualify for tax deferral privileges. The Fund intends to invest so as to comply with these Code requirements.

For information concerning the federal income tax consequences to holders of the underlying variable annuity or variable life insurance contracts, see the accompanying prospectus for the applicable contract.

3. HOW THE FUND SHARES ARE PRICED

The Fund buys or sells its shares at its net asset value, or NAV, per share next determined after receipt of a purchase or redemption plus any applicable sales charge. The Fund calculates its NAV per share class every day the New York Stock Exchange (NYSE) is open, as of the close of regular trading on the NYSE, which is normally 4:00 p.m. Eastern Time.

You may enter a buy or sell order when the NYSE is closed for weekends or holidays. If that happens, your price will be the NAV calculated as of the close of the next regular trading session of the NYSE.

The Fund may invest in certain securities which are listed on foreign exchanges that trade on weekends or other days when the Fund does not price its shares. As a result, the NAV of the Fund’s shares may change on days when shareholders will not be able to purchase or redeem shares.

The Fund’s investments are generally valued based on market quotations which may be based on quotes obtained from a quotation reporting system, established market makers, broker dealers or by an independent pricing service. Short-term debt investments having a maturity of 60 days or less are valued at amortized cost, which approximates the fair value of the security. Assets or liabilities denominated in currencies other than the U.S. dollar are converted into U.S. dollars at the current market rates on the date of valuation as quoted by one or more sources. When market quotations are not readily available for a portfolio security or other asset, or, in the opinion of the Adviser, are deemed unreliable, the Fund will use the security’s or asset’s “fair value” as determined in good faith in accordance with the Fund’s Fair Value Pricing Policies and Procedures, which have been approved by the Board. As a general principle, the current fair value of a security or other asset is the amount which the Fund might reasonably expect to receive for the security or asset upon its current sale. The Fund’s Pricing Committee, whose members are selected by the senior management of the Adviser and reported to the Board, is responsible for recommending fair value procedures to the Board and for administering the process used to arrive at fair value prices.

Factors that may cause the Fund’s Pricing Committee to fair value a security include, but are not limited to: (1) market quotations are not readily available because a portfolio security is not traded in a public market, trading in the security has been suspended, or the principal market in which the security trades is closed, (2) trading in a portfolio security is limited or suspended and not resumed prior to the time at which the Fund calculates its NAV, (3) the market for the relevant security is thin, or the price for the security is “stale” because its price has not changed for 5 consecutive business days, (4) the Adviser determines that a market quotation is not reliable, for example, because price movements are highly volatile and cannot be verified by a reliable alternative pricing source, or (5) a significant event affecting the value of a portfolio security is determined to have occurred between the time of the market quotation provided for a portfolio security and the time at which the Fund calculates its NAV.

In determining the fair value of securities, the Pricing Committee will consider, among other factors, the fundamental analytical data relating to the security, the nature and duration of any restrictions on the disposition of the security, and the forces influencing the market in which the security is traded.

Foreign equity securities in which the Fund invests may be traded in markets that close before the time that the Fund calculates its NAV. Foreign equity securities are normally priced based upon the market quotation of such securities as of the close of their respective principal markets, as adjusted to reflect the Adviser’s determination of the impact of events, such as a significant movement in the U.S. markets occurring subsequent to the close of such markets but prior to the time at which the Fund calculates its NAV. In such cases, the Pricing Committee may apply a fair valuation formula to those foreign equity securities based on the Committee’s determination of the effect of the U.S. significant event with respect to each local market.

Certain of the Fund’s portfolio securities are valued by an independent pricing service approved by the Board. The independent pricing service may utilize an automated system incorporating a model based on multiple parameters, including a security’s local closing price (in the case of foreign securities), relevant general and sector indices, currency fluctuations, and trading in depository receipts and futures, if applicable, and/or research evaluations by its staff, in determining what it believes is the fair valuation of the portfolio securities valued by such independent pricing service.

There can be no assurance that the Fund could purchase or sell a portfolio security or other asset at the price used to calculate the Fund's NAV. Because of the inherent uncertainty in fair valuations, and the various factors considered in determining value pursuant to the Fund's fair value procedures, there can be material differences between a fair value price at which a portfolio security or other asset is being carried and the price at which it is purchased or sold. Furthermore, changes in the fair valuation of portfolio securities or other assets may be less frequent, and of greater magnitude, than changes in the price of portfolio securities or other assets valued by an independent pricing service, or based on market quotations.

4. SHAREHOLDER INFORMATION

FREQUENT TRADING POLICY

The Board has adopted policies and procedures reasonably designed to deter frequent trading in shares of the Fund, commonly referred to as "market timing," because such activities may be disruptive to the management of the Fund's portfolio and may increase Fund expenses and negatively impact the Fund's performance. As such, the Fund may reject a purchase or exchange transaction or restrict an insurance company's contract holder from investing in the Fund for any reason if the Adviser, in its sole discretion, believes that such contract holder is engaging in market timing activities that may be harmful to the Fund. The Fund discourages and does not accommodate frequent trading of shares by contract holders.

The Fund invests portions of its assets in securities of foreign issuers, and consequently may be subject to an increased risk of frequent trading activities because frequent traders may attempt to take advantage of time zone differences between the foreign markets in which the Fund's portfolio securities trade and the time as of which the Fund's net asset value is calculated ("time-zone arbitrage"). The Fund's investments in other types of securities may also be susceptible to frequent trading strategies. These investments include securities that are, among other things, thinly traded, traded infrequently, or relatively illiquid, which have the risk that the current market price for the securities may not accurately reflect current market values. The Fund has adopted fair valuation policies and procedures intended to reduce the Fund's exposure to potential price arbitrage. However, there is no guarantee that the Fund's net asset value will immediately reflect changes in market conditions.

Shares of the Fund are sold exclusively through institutional omnibus account arrangements registered to insurance companies and used by them as investment options for variable contracts issued by insurance companies. Such omnibus accounts allow for the aggregation of holdings of multiple contract holders and do not identify the underlying contract holders or their activity on an individual basis. Certain insurance companies have adopted policies and procedures to deter frequent short-term trading by their contract holders. The Fund may rely on an insurance company's policies and procedures, in addition to the Fund's techniques, to monitor for and detect abusive trading practices. The Fund reserves the right, in its sole discretion, to allow insurance companies to apply their own policies and procedures which may be more or less restrictive than those of the Fund. Contract holders are advised to contact their insurance company for further information as it relates to their specific contracts.

In addition to the foregoing, the Fund requires all insurance companies to agree to cooperate in identifying and restricting market timers in accordance with the Fund's policies and will periodically request contract holder trading activity based on certain criteria established by the Fund. The Fund may make inquiries regarding contract holder purchases, redemptions, and exchanges that meet certain criteria established by the Fund. There is no assurance that the Fund will request such information with sufficient frequency to detect or deter excessive trading or that review of such information will be sufficient to detect or deter excessive trading effectively. Furthermore, an insurance company may be limited by the terms of an underlying insurance contract regarding frequent trading from restricting short-term trading of mutual fund shares by contract owners, thereby limiting the ability of such insurance company to implement remedial steps to deter market timing activity in the Fund.

If the Fund identifies market timing activity, the insurance company will be contacted and asked to take steps to prevent further market timing activity (e.g., sending warning letters, placing trade restrictions on the contract holder's account in question, or closing the account). If the insurance company refuses or is unable to take such remedial action, a determination will be made whether additional steps should be taken, including, if appropriate, terminating the relationship with such insurance company.

Although the Fund will use reasonable efforts to prevent market timing activities in the Fund's shares, there can be no assurances that these efforts will be successful. As some insurance companies' contract holders may use various strategies to disguise their trading practices, the Fund's ability to detect frequent trading activities by insurance companies' contract holders may be limited by the ability and/or willingness of the insurance companies to monitor for these activities.

For further information about the Fund, please call or write your insurance company, or call 800-826-2333, or write to the Fund at the address on the back cover page.

IV. FINANCIAL HIGHLIGHTS

The financial highlights table that follows is intended to help you understand the Fund's Initial Class shares financial performance for the past five years. Certain information reflects financial results for a single Fund share. The total returns in the table represent the rate that an investor would have earned or lost on an investment in the Fund (assuming reinvestment of all dividends and distributions). The information has been audited by Ernst & Young LLP, the Trust's independent registered public accounting firm, whose report, along with the Fund's financial statements are included in the Fund's annual report, which is available upon request. Total returns do not include fees and expenses imposed under your variable annuity contract and/or life insurance policy. If these amounts were reflected, the returns would be lower than those shown.

VANECK VIP EMERGING MARKETS BOND FUND

FINANCIAL HIGHLIGHTS

For a share outstanding throughout each year:

	Initial Class Shares				
	Year Ended December 31,				
	2019	2018	2017	2016	2015
Net asset value, beginning of year	\$ 7.76	\$ 8.90	\$ 8.12	\$ 7.63	\$ 9.33
Income from investment operations:					
Net investment income	0.61 (b)	0.47 (b)	0.60 (b)	0.36	0.56
Net realized and unrealized gain (loss) on investments	0.37	(0.97)	0.37	0.13	(1.70)
Total from investment operations	0.98	(0.50)	0.97	0.49	(1.14)
Less dividends and distributions from:					
Net investment income	(0.03)	(0.64)	(0.19)	—	(0.56)
Net asset value, end of year	\$ 8.71	\$ 7.76	\$ 8.90	\$ 8.12	\$ 7.63
Total return (a)	12.61 %	(6.14) %	12.24 %	6.42 %	(13.09) %
Ratios/Supplemental Data					
Net assets, end of year (000's)	\$21,246	\$21,606	\$27,046	\$26,977	\$29,483
Ratio of gross expenses to average net assets	1.92 %	1.67 %	1.57 %	1.34 %	1.34 %
Ratio of net expenses to average net assets	1.10 %	1.10 %	1.10 %	1.10 %	1.10 %
Ratio of net expenses to average net assets excluding interest expense	1.10 %	1.10 %	1.10 %	1.10 %	1.10 %
Ratio of net investment income to average net assets	7.33 %	5.80 %	7.04 %	4.06 %	6.38 %
Portfolio turnover rate	276 %	286 %	586 %	595 %	572 %

(a) Total return is calculated assuming an initial investment made at the net asset value at the beginning of year, reinvestment of any dividends and distributions at net asset value on the dividend/distribution payment date and a redemption at the net asset value on the last day of the year. The return does not reflect the deduction of taxes that a shareholder would pay on Fund dividends/distributions or the redemption of Fund shares. Total returns do not include fees and expenses imposed under your variable annuity contract and/or life insurance policy. If these amounts were reflected, the returns would be lower than those shown.

(b) Calculated based upon average shares outstanding.

For more detailed information, see the Statement of Additional Information (SAI), which is legally a part of and is incorporated by reference into this prospectus. The SAI includes information regarding, among other things: the Fund and its investment policies and risks, management of the Fund, investment advisory and other services, the Fund's Board of Trustees, and tax matters related to the Fund.

Additional information about the investments is available in the Fund's annual and semi-annual reports to shareholders. In the Fund's annual report, you will find a discussion of the market conditions and investment strategies that significantly affected the Fund's performance during its last fiscal year.

- Call VanEck at 800.826.2333, or visit the VanEck website at vaneck.com to request, free of charge, the annual or semi-annual reports, the SAI or other information about the Fund.
- Reports and other information about the Fund are available on the EDGAR Database on the SEC's Internet site at <http://www.sec.gov>. In addition, copies of this information may be obtained, after paying a duplicating fee, by electronic request at the following e-mail address: publicinfo@sec.gov.

Shares of the Fund are offered only to separate accounts of various insurance companies to fund the benefits of variable life policies and variable annuity policies. This prospectus sets forth concise information about the VanEck VIP Trust and Fund that you should know before investing. It should be read in conjunction with the prospectus for the Contract which accompanies this prospectus and should be retained for future reference. The Contract involves certain expenses not described in this prospectus and also may involve certain restrictions or limitations on the allocation of purchase payments or Contract values to the Fund. In particular, the Fund may not be available in connection with a particular Contract or in a particular state. See the applicable Contract prospectus for information regarding expenses of the Contract and any applicable restrictions or limitations with respect to the Fund.
